

## **PART 3C-**

### **ORDER WHAT YOU CAN ASAP.**

Recent reports have come out that the present administration is now aggressively trying to block all imports of these prescription treatments at customs to stop their access for use. I think that starts in November. People cannot get them here in this country anymore due to the CDC blocking them from sale and pharmacies being ordered to not allow doctors to fill the prescriptions, so everyone is ordering from overseas where most of these meds are made anyway. Many of these overseas pharmacies require no prescription because these meds are very safe and have been sold as over the counter meds for decades. Especially Ivermectin and HCQ which are having great success all over the world and are considered the safest of drugs. These have been OTC meds for eons and used in many counties as weekly medicine for malaria with no side effects. Interestingly enough, countries where they use HCQ as a weekly med their COVID numbers are almost non-existent. Big Tech and Big Pharma working through the UN and the CDC have joined forces to block all treatments because they are both invested in each other and the vaccine mandates.

NOTE: Not every state is participating in blocking the meds so I am not sure if that means yours could get by. Mine did, but I heard others did not. But they did not live in PA. That was was.....wait for it.....Illinois ! Chicago, to be exact. So no surprise there. I have noticed the two places overseas that I used did not send them in boxes easily recognized as meds. They are aware of this and maybe that is why they are sending things in normal unmarked boxes.

The governments that are under the control of Big Pharma bankers are blocking treatments worldwide, with the exception of India, China, Japan, Russia, a lot of the Middle Eastern Arab countries, and a handful of South American countries. These countries are not mandating vaccines and have stopped many of the vaccines in their countries due to the alarming high number of deaths and severe permanent side effects. Instead they are giving an Ivermectin/HCQ/antibiotic combo pack to every citizen, and since doing so, they have seen their COVID numbers plummet and become almost non-existent and still stay that way ! While the USA and other western countries like Canada, Australia, the UK, Europe, and Israel, that are controlled by and all beholden to Big Pharma, refuse to do so. Tells you right there which countries Big Pharma and the UN controls and is targeting. They are crippling and taking out the western countries most resistant to communism and totalitarianism. All the countries using the vaccine only approach, and the remdesivir/ventilator only protocol, have seen COVID numbers spike straight through the roof and death rates more than double than when the original outbreak occurred. Despite the effort to cover up the results, studies are now showing that the vaccines are causing the variants and the spikes. Exactly what all the top scientists and doctors warned of over a year ago.

I've never seen anything like this push to stop treatments for any epidemic or pandemic in past medical history. Something is amiss when treatments discovered and used to treat hundreds of thousands with great success by the top doctors in their fields, are then banned and blocked from use allowing hundreds of thousands to die for the sake of a forced vaccination mandate.

So now most people are getting these safe, very effective, decades old, tried and trusted, nobel prize winning meds from sites not requiring a prescription, almost all of which are overseas, and have operated for years selling these meds because ALL OF THEM are OVER THE COUNTER meds and have been considered among the most safe to use for decades. Decades ! Even having nobel prizes awarded for the meds and to the doctors who developed them. So why the sudden claim of harm? The mandatory vaccine only agenda is killing people.

**GET IVERMECTIN AND HYDROXYCHLOROQUINE (HCQ) WHILE YOU STILL CAN.**

**IN ADDITION TO BUDESONIDE AND 3% FOOD GRADE HYDROGEN PEROXIDE, YOU SHOULD GET IVERMECTIN AND HYDROXYCHLOROQUINE (HCQ).** You want the budesonide to nebulize for your lungs if needed. The other two meds prevent and treat the overall illness and the infection, and you may find that you do not need the budesonide using the other two, or vice versa. Many of the protocols use a combination of two or all three of these meds to address the different complications that can arise in people with numerous comorbidities. But the minute you experience difficulty breathing it would behoove you to have a steroid or the natural alternative steroid on hand (3% or 12% HP) to start nebulizing right away to stop it from its progression into your lungs and elsewhere.

And remember, if you have nothing else on hand, try the 0.9% saline solution mixture to nebulize. Like you would gargle with salt water at the onset of a sore throat. But use distilled water and either Celtic sea salt, Himalayan salt, or Redmonds Real Salt. Follow the salt solution recipes in the protocol links. I would add a drop or two of iodine to the saline solution if you have it to strengthen the solution.

Nebulizing gets into the lungs faster and more efficiently. It deals with the micro clotting in the lining of the lungs. When ordering be careful to look for "respules" to nebulize, NOT the inhaler. However, if you have nothing else, go for the inhaler or the steroid pills until you do. (You could use the Hydrogen Peroxide while waiting to fill an order. Get some to have on hand.) Anything is better than nothing. But nebulizing using the respules gets down into the lungs tissue more efficiently than using an inhaler would. Some people have had success using sprays and inhalers when nothing else was available. It just took longer. If you are older or have comorbidities get as much as you can to have on hand because a lot of this will not be available, especially with the manipulation of the supply chain "shortages".

**DO NOT WAIT TO GET THESE BECAUSE YOU WON'T FIND A DOCTOR WHO CAN GET IT LAST MINUTE, IF AT ALL. SO DO YOURSELF A FAVOR AND GET IT ON HAND NOW. AND GET ALL THE OTHER OPTIONS IN CASE THEY REMOVE THESE FROM SALE.**

#### **STEROID TABLETS**

**IF YOU CANNOT GET THE NEBULIZED FORM OF A STEROID LIKE BUDESONIDE, THERE IS ALSO PREDNISOLONE TABS (THE ACTIVE FORM OF PREDNISONE) THAT YOU CAN TAKE. I HAVE SEEN THAT PARTICULAR STEROID PRESCRIBED IN THE PROTOCOLS.**

Read the protocols first, make a list to compare them, and figure it out, if your doctor will not help you. Get whatever you can on the protocol lists and make a plan to have at hand.

Along with the Ivermectin, the HCQ, and Budesonide, you may want to have on hand these antibiotics from the protocols:

**Azithromycin; clarithromycin; doxycycline; (and dexamethisone) for the different needs you may develop.**

I would ask a doctor first, if you are blessed enough to have one, or know one that will work with you. I have not found one yet in the system who is willing to go against the hospital mandates, even though they know you are allergic to vaccines and have had SEVERE, NEAR DEATH adverse reactions to them in the past and were warned never to take them again. So finding a doctor not controlled by the system is easier said than done with the inexplicable "one size fits all" mandates now in place.

Thousands of doctors who refuse to be a part of this global tyranny forcing a one size fits all mandate of treatment that does not work, have formed alliances online, and are joining forces to form private group practices together, in order to help people get the treatment and help they need. Those websites and links are below to get a telemed doctor, but they are in such great demand that they can be overwhelmed with the sheer number of calls coming in on a daily basis from all over the country. Their numbers are quickly growing though, so give them a try.

I still suggest getting whatever meds you can get ahead of time, even if you cannot contact a telemed right away, because the blocking of access to the meds applies even to them, so it will take them time to get you what you need. They do not take insurance for obvious reasons so the place they would use that require a prescription will cost you far more than the links below I used to get mine. I used those two pharmacies because they were legit and they had customer service that worked and did not require a prescription. I knew people who used the inhousepharmacy so I used that one first. It took a long time (It was in Australia where they are being scrutinized) but it did arrive. The other place (Reliable Rx Pharmacy) I found was in India where most of these products are manufactured, and it had a very high rating. It turned out to have quicker and better service and they update you every step of the way.

In the meanwhile, GET PREPARED AND RESEARCH AND READ EVERY PROTOCOL. BE FAMILIAR WITH THEM. Ask people you know who have used them if you can. Or save yourself the time and call the doctor websites in the links below and let them help you put it all together if you feel you need help and can afford it. The more you read them, the more they will be easier to understand.

AND EVEN IF YOU CAN GET THE BUDESONIDE, IT COULD GET BANNED FROM SALE, SO I WOULD STILL GET THE NATURAL NEBULIZED 3 % or 12% FOOD GRADE HYDROGEN PEROXIDE PROTOCOL.

It works for colds, flu, pneumonia, viruses, lung conditions. gut issues. gum disease, heart problems, vascular issues, and on and on. It could keep you out of a doctor or dental office in flu season. I used a form of this in my "before nebulizing years" with the old tried and true "head held over a pan of steaming water with a towel over your head" technique. Back then you added a little HP to the steaming pan of water and under the towel tent you went. Not as efficient as a nebulizer, but it worked okay for ending flu and colds and kept them from becoming a respiratory disaster. Again it is about lessening viral load and killing off what you can before it gets to your lungs.

So get a nebulizer now. I know I keep repeating that, but it is important because of the severity of the attack on the lungs with the acute sudden onset respiratory attack that can happen. Links are below where to buy them. (It is not Amazon.)

[Dr Mercola; Nebulized Peroxide — My Favorite Treatment ...](#)

**BILL MUNROE METHOD HYDROGEN PEROXIDE INHALATION - READ THIS article. This method is good for other issues also. This link has Video instructions for inhaled 3% HP. Munroe died in 2014. In his 60's he had cancer and was told he would not survive past a few months. He researched and came up with this 3% HP treatment which he sprayed and inhaled throughout the day. This was before anyone thought to nebulize it. The simple treatment he discovered and developed worked so well that Bill Munroe lived 30 more years cancer free. This was after they gave him a death sentence of 3 months. He used his 3% HP UNdiluted spray everyday. You can read about it on the site link.**

**NOTE: This Munroe method was used long BEFORE the nebulized version. You should use nebulized HP for COVID . The reason it is diluted when nebulized is because when nebulized it goes directly into lung tissue which is very delicate. The Munroe method is not diluted and is sprayed into the mouth and inhaled through quick strong breaths to force it up sinuses. Not nebulized directly into the lungs. A much different delivery system. (Better than nothing though, if you cannot get a nebulizer or the 3% food grade HP.) I would use FOOD GRADE as much as possible because it does not have the chemicals added, and when Munroe came up with this method, food grade HP was NOT available at that time and it definitely was not nebulized. It is now. It is still up in the air if regular non-food grade HP may damage lungs due to nebulizing something chemically processed. Food Grade is edible and not chemically processed. I would use food grade if you can get it. As Mercola and Levy say in the videos, if you are in a position where you cannot get the food grade HP then use the 3% regular type because you are not using it on a daily basis long term. Keep the other regular cheaper non-food grade HP for sterilizing objects and cleaning around the house.**

**HERE IS DR. BROWNSTEIN'S WRITTEN DIRECTIONS FOR HIS PROTOCOL. IT IS ALSO IN THE MERCOLA PDF COMPARISON CHART. THAT ONE IS EASIER TO READ AND HAS THE CONVERSION INTO US MEASUREMENTS. They are both the same recipes.**

**DIRECTIONS FROM: [Dr. Brownstein's Blog on How to Nebulize • StevenYager.org](#)**

For Daily Maintenance with NO Infection:

5 CCs (5 ml) 0.9% Saline Solution

1 CCs (1 ml) 3% Food Grade Hydrogen Peroxide

Nebulize until Metered Bowl is Empty

Once per day.

For people with Asthma or High Blood Pressure:

3 CCs (3 ml) 0.9% Saline Solution

0.43 CCs (0.43 ml)(11 Drops) 3% Food Grade Hydrogen Peroxide

Nebulize until Metered Bowl is Empty

Once per day.

Delicate Lungs:

3 CCs (3 ml) 0.9% Saline Solution

0.21 CCs (0.21 ml)(5 Drops) 3% Food Grade Hydrogen Peroxide

Nebulize for 10 minutes

Once per day.

Note:

11 Drops from an eye dropper is approximately 0.43 CCs or 0.43 ml.

Given that the overall mass of 3% Food Grade Hydrogen Peroxide rarely changes.

1 drop is in fact a Scientific Measurement.

All drops are the same mass.

People with asthma should be aware that this treatment will cause excessive coughing

and that is normal for them.

People with high blood pressure are prone to nose bleeds,  
hence the reduced H<sub>2</sub>O<sub>2</sub>.

## **WHERE TO ORDER NEBULIZERS**

QUIET, DURABLE MACHINES:

[HOME RECIPE FOR HYDROXYCHLOROQUINE \(HCQ\)](#)

**NOTE: TONIC WATER HAS QUININE IN IT, WHICH IS THE ACTIVE INGREDIENT IN HCQ, HENCE THE NAME TONIC.** Many people bought this in the early days of COVID to drink while ill and it helped them get better faster. I am not sure if it would work on it's own, but maybe if you are taking all the supplements and natural alternatives and have nothing else and you added tonic water with Quinine, it would be an aid in faster healing. It can't hurt to add it to whatever else you are taking. Quinine in tonic water is the active ingredient in HCQ. I know people who used this at the beginning of the COVID panic when we were told there were no treatments and it did help them heal faster. But watch out for HFCS in it. Get the organic type if you can afford it or try to find a brand without High Fructose Corn Syrup (HFCS).

**NOTE: IT MUST SAY QUININE IN THE INGREDIENTS. NOT ALL MODERN DAY TONIC WATER HAS QUININE. WITHOUT QUININE IT IS JUST SUGAR WATER AND IT IS USELESS (except as a cocktail mix).**

HCQ works best when taken as a prophylaxis, or very early on in the illness. If COVID is advanced, HCQ may not be quite as effective as Ivermectin or Budesonide. Or it may take longer to work. Ivermectin and Budesonide work even when in advanced stages. But even if taken later, HCQ has helped many people who have less comorbidities and are not as compromised in age and health. Many of the protocols combine the Ivermectin and HCQ depending on the area where the problem is located. Budesonide is used to prevent it from going into the lungs the minute you have breathing issues or when you first feel something coming on. Budesonide works well used early and with late use, but using it early stops the long term lung damage. Since everyone has heard about the success and the benefits of Ivermectin, Budesonide, and HCQ I will not dwell on these. But here are links to get them and to get a doctor to prescribe them and to treat you. Dosage of Ivermectin is calculated according to body weight. The conversion chart is in the FLCCC Alliance link.
